## Reference and recommendation for Eckstine Electric Company

To whom it may concern,

As the owner-representative for a recent wastewater treatment plant expansion project at Boxelder Sanitation District I have had the good fortune to have spent the last 2 years working with Eckstine. From the planning stages to the day-to-day installation work, I have been impressed with their technical skills, ability to be flexible, open communications, and willingness to educate me in electrical issues.

I feel that I genuinely became friends with many of the electricians onsite and appreciated their good nature almost as much as their technical expertise. Through effective planning, we were able to minimize downtime during impactful events (such as the installation of transformers, a new emergency generator, and new influent pump motors). They were very helpful in coordinating with their integration subcontractor for PLC and HMI work, which was very important to me. I greatly appreciate their availability to answer my after-hours "emergency" calls throughout the project.

I can, without reservation, recommend Eckstine as an excellent partner for any scale construction project. Please feel free to contact me if you would like to hear more.
