RE: Success on City of Loveland Water and Wastewater Capital Projects

Justin,

I'd like to congratulate Eckstine Electric on the recent selection to participate in the upcoming 2025 WRF Capacity Improvements project for the City of Loveland. The City is looking forward to continuing the working relationship with Eckstine.

Eckstine has been a trusted electrical contractor for the City's Water and Wastewater department for nearly 20 years. This longstanding relationship is built on trust, high quality workmanship, skilled labor, and fair pricing. Together, the City and Eckstine have completed over fifteen water and wastewater projects. In the last ten years, Eckstine has exceeded the City's expectations on all regards for the previous WRF plant expansion, 29th Street P2 Pump Station, various sewer lift station rehabilitations and standby generator replacements, as well as the renovation of the WTP Administration Building.

A key piece to what makes a successful project comes down to the individuals selected to be a part of that team. Time and time again, Eckstine's staff continue to outperform the competition. From office management; to the project manager; to the foreman and crew, Eckstine delivers a high-quality product with solid communication, outstanding teamwork, and the ability to stay flexible when changes occur.

On behalf of the City of Loveland, thank you for being a trusted contractor, a trusted advisor, and understanding what it means to build long-term working relationships in the construction industry. We are looking forward to another successful project at the WRF and excited to see what the future holds.

Sincerely,

A handwritten signature in blue ink that reads "Brian Gandy".
